SUMMARY

Platform and Site Reliability Engineer with 5 years of experience as the **sole platform owner** building and operating **cloud-native** production infrastructure for a conversational AI platform. Architected **multi-region AWS distributed systems** across India, US, and Canada serving 18 enterprise banking and telecom clients. Built the entire **Infrastructure as Code** platform from the ground up — **Terraform, Kubernetes, CI/CD, observability, DevSecOps**, and **incident response** — enabling 30+ **microservices** to ship reliably at scale with **high availability**.

TECHNICAL SKILLS

Cloud:	AWS (EKS, EC2, RDS, VPC, IAM, ASG, S3, CloudWatch, Route53, Secrets Manager)
IaC:	Terraform, CloudFormation, Ansible, Helm, Kustomize
Containers:	Kubernetes, Docker, EKS, ArgoCD, Argo Workflows, KEDA, Karpenter, container orchestration
CI/CD:	GitLab CI, GitLab Runner, Trivy, AWS Inspector
Observability:	Grafana, Prometheus, Loki, Promtail, Pyroscope, Opsgenie
Networking:	VPC design, SIP/MRCP/VoIP, OpenSIPS, RTPEngine, Linkerd, Teleport, Pritunl VPN
Languages:	Python, Bash, HCL, YAML
Databases:	PostgreSQL, Redis
Practices:	SRE, DevSecOps, GitOps, incident management, on-call, FinOps, infrastructure automation, high availability, Linux

PROFESSIONAL EXPERIENCE

Senior Platform Engineer	Apr 2024 – Present
<i>Skit.ai — Conversational AI Platform (R&D)</i>	
- Designed multi-region expansion (India, US, Canada) with region-level fault isolation and disaster recovery, ensuring high availability — a failure in one region cannot cascade to the global distributed system, minimizing blast radius for all enterprise clients - Built Kavach, an autonomous alerting system powered by Claude AI for intelligent alert triage, root-cause analysis, and auto-remediation — solving on-call burnout with an LLM-driven detection-to-resolution loop integrated with Jira and Opsgenie - Led org-wide FinOps initiative: implemented multi-tenant cost attribution, removed unused AWS resources to reduce tech debt, and reduced cluster costs by 30% through Prometheus metrics and historical performance analysis - Implemented Karpenter for intelligent node provisioning and KEDA for event-driven workload autoscaling on EKS, replacing static ASG node groups and enabling cost-efficient, demand-responsive cluster scaling across all production regions - Architected per-client IAM credential isolation and secrets management across 3 AWS regions, ensuring zero cross-tenant access risk for 18 enterprise banking and telecom clients — a security-first multi-tenancy design addressing legal and compliance requirements - Own incident response as the sole on-call engineer for all production environments — triaging Opsgenie alerts, coordinating cross-functional resolution, and driving blameless post-incident reviews to prevent recurrence - Enabled SBI client project go-live — handled client communication, infrastructure provisioning, and production readiness to bring the project from staging to production - Designed and built scalable SIP/VoIP cloud-native infrastructure on AWS EKS for ICICI Bank using OpenSIPS and RTPEngine, migrating from standalone servers to Kubernetes container orchestration — significantly improving reliability and scalability with TLS/SRTP encryption - Resolved 26 production incidents including EKS cluster-down events, database failovers, and VoIP call routing failures through structured SRE practices and root-cause analysis - Created self-service developer documentation enabling 30+ microservice teams to autonomously handle deployments, rollbacks, and operational tasks — acting as a force multiplier by eliminating platform team bottlenecks org-wide	
DevOps Engineer	Jan 2023 – Mar 2024
<i>Skit.ai</i>	
- Owned the entire Terraform and CloudFormation codebase as sole infrastructure owner, managing all AWS resources (EKS, RDS, VPC, IAM, EC2, Lambda, ACM, ASG, S3, Route53, Secrets Manager) across 3 production regions - Developed CI/CD framework with GitLab Runners and Agent following GitOps principles, reducing release times by 50% and code integration issues by 30% — powering automated deployments for 30+ microservices using ArgoCD and refined Helm charts - Established DevSecOps security pipeline integrating Trivy container scanning and AWS Inspector into CI/CD workflows, shifting security left and standardizing vulnerability remediation as part of the SDLC - Architected and implemented the entire production EKS lifecycle — from initial VPC design and CNI selection to multi-region scaling and automated disaster recovery — across India and US production regions - Halved compute footprint by rightsizing ASG node groups from 16 to 8 nodes through systematic workload profiling and bin-packing analysis; improved pre-production availability from 50% to 95% by optimizing workloads for SPOT instances - Deployed full observability stack — Grafana, Prometheus, Loki, and Pyroscope — along with Linkerd service mesh for mTLS and traffic management, providing service health monitoring, log aggregation, and continuous profiling visibility across all production clusters	

- Built a semi-automated **Python** application to improve SDLC workflow, cutting lead time for changes by 45%; built a **DORA** metrics extraction app storing data in **PostgreSQL** (RDS) for engineering performance evaluation
- Managed and deployed **machine learning** applications on **Kubernetes** with advanced scaling and scheduling policies; enabled individual deployment of standalone scripts to any cluster

DevOps Support Engineer

Jun 2021 – Dec 2022

Vernacular.ai (now Skit.ai)

- Managed client-specific on-premises systems, ensuring peak performance and reliability across enterprise banking deployments
- Diagnosed and resolved production incidents promptly, minimizing downtime and enhancing system stability for enterprise clients
- Led a comprehensive on-premises setup for a client, reducing delivery time from 1 week to 2 days through **Ansible** automation
- Leveraged **Terraform** to establish and manage **EKS** clusters, simplifying deployments and improving scalability
- Optimized resource allocation by reducing the number of **ALBs** in production from 7 to 2, cutting networking costs
- Streamlined the onboarding process for new team members, creating documentation and runbooks for operational workflows

NOTABLE PROJECTS

- **Multi-region expansion:** Architected and executed production expansion from India-only to 3 **AWS** regions (India, US, Canada) — designing **VPC** architecture, **EKS** clusters, cross-region networking, and **Terraform** modules for repeatable region provisioning
- **Kavach alerting system:** Designed autonomous alerting platform with **Claude AI** for intelligent triage, root-cause analysis, and auto-remediation — integrated with **Jira** for ticket creation and **Opsgenie** for escalation workflows
- **SIP/VoIP on EKS:** Engineered scalable **SIP** telephony infrastructure using **OpenSIPS** and **RTPEngine** proxies on **Kubernetes**, with **TLS** encryption on SIP signaling and **SRTP** on media streams for enterprise-grade security
- **On-prem banking infra:** Established hybrid infrastructure for ICICI Bank — bare-metal servers, **VoIP** telephony, and on-prem **Kubernetes** clusters alongside **AWS** cloud services for a seamless hybrid deployment model

EDUCATION

Bachelor of Technology (BTech), Electronics and Telecommunication — MGM's Jawaharlal Nehru Engineering College, Aurangabad (2017 – 2021)

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | **Red Hat Certified Engineer (RHCE)** | **Red Hat Certified System Administrator (RHCSA)** | **Red Hat Certified Specialist in Ansible Automation** | **Red Hat Certified Specialist in OpenShift Administration**
